DXC Continuing Professional Development

Simplify learning compliance tracking

Tracking learning compliance has never been easier: Seamlessly integrate continuing education (CE) tracking or advanced certification management with your learning management system — eliminate duplicate processes and simplify reporting for business purposes.

Business case

Organizations today face several key challenges in tracking employees' continuing education (CE) progress and managing advanced certifications. For example, gaps may exist between an existing learning management system and the tracking/management of continuing professional development. Other common issues include the following:

- Duplication of effort and other inefficiencies
- Intricate rules and redundant processes
- Complex requirements that vary by jurisdiction
- Lack of full visibility into each learner's progress
- Barriers to reporting

These challenges are heightened for organizations in highly regulated industries whose employees must keep certifications current.

One system, better visibility

The DXC Continuing Professional Development (CPD) platform bridges the gap between your organization's learning management system and your needs and requirements for tracking and managing learning compliance.
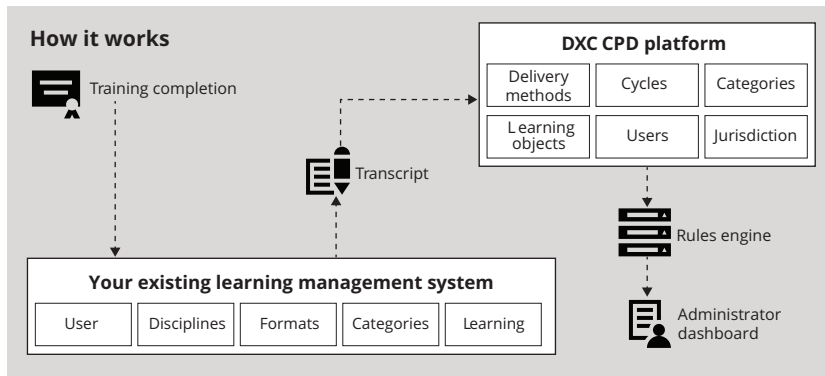

Key benefits

- Simplify and automate your continuing education (CE) tracking and advanced certification management
- Natively integrate requirements and rules into your existing learning management system
- View all compliance requirements and status at a glance with an integrated dashboard
- Streamline compliance processes and large learning catalogs to meet ever-evolving requirements
- Protect your organization by staying in compliance

DXC's solution increases the ROI of your primary training platform. CPD empowers your learning administrators by fully automating advanced certification or compliance coursework, organizing and natively tracking course completion.

The solution handles myriad requirements and intricate rules. A consolidated dashboard allows learning administrators to centrally view and manage key data as well as produce detailed reports. The dashboard also enables learners to easily view their own progress.

DXC CPD — features

Integrate CPD with your learning management system. Then view it all at a glance and generate detailed reports:

- Enter learning objects from your learning management system
- Track learning objects based on various data points
- See all training applicable to each employee/learner
- Track and report on certification and membership progress
- Store user elements in default or custom fields
- Populate data through feeds or direct manual updates

Transform your enterprise IT

DXC's Continuing Professional Development solution is one of several that enable organizations to unlock the transformative power of today's leading human capital management technologies. These tools empower your organization to:

- Operate as a next-gen workplace and improve employee productivity
- Increase visibility into your workforce via data analytics
- Make better decisions based on business insights

Why DXC?

- Offers a proven approach to overcoming training tracking/ management challenges
- Adds measurable value to your learning and development strategy
- Enables your enterprise to customize its training platform to meet unique business requirements and maximize IT investment value
- Helps your enterprise to solve complex business challenges
- Assists your organization with creating efficiencies
